## IP10 and IPU10 0.5t Vertical Clamps

CrosbyIP 0.5t IP10 (p/n 2701674) and IPU10 (p/n 2701675) Vertical Clamps have been updated to allow for a minimum WLL of 5% of maximum working load limit. All other IP sizes and models will remain at 10% of maximum working load limit.

**NEW: IP10 & IPU10  
Stamped Markings**

**OLD: IP10 & IPU10  
Stamped Markings**

An authorized CrosbyIP repair center may re-stamp the minimum working load limit on clamps previously purchased; provided that the year of manufacture is no older than 2015 and the authorized repair center ensures the IP clamp meets all inspection criteria required by Crosby.

To determine the year of manufacture, locate the two digits prior to the serial number. See image below for clarity.

For more information, contact your local Crosby District Sales Manager or Crosby Customer Service.
