

LSP Round Sling L

Product information

L round slings are made of multiple high-tenacity yarns encased in an endless sleeve (Type 5). The entire assembly is covered by a seamless, double-wall blue nylon jacket that includes a protective micro-film. A round sling is constructed from a polyester or polyethylene load-bearing yarn wound in multiple continuous loops. Since the load-bearing yarns never come into contact with the load, they offer higher capacities compared to conventional synthetic slings of similar weight and size.
