## GX PLATE CLAMP

### FEATURES

- Features Drop-Forged and Heat Treated Body and Components
- Can Be Used for Both Vertical and Horizontal to Vertical Lifting Through 180°
- Exclusive Feature is a Patented Wear Indicator System. When Any of the Cam's Straight Line, Convex Teeth Are Flattened Between Unique Wear Indicator Grooves, It is Time to Change the Cam
- Note: The Pad and Cam Should Be Replaced at the Same Time
- Clamps Are 100% Proof Tested and Certificate of Test Supplied with Each Clamp
- Minimum WLL of at Least 10% of the Maximum WLL

Select the correct clamp size for the job to be done  
 Determine the weight of the lifting plate  
 Do not exceed the working load limits

### GX CLAMP INFORMATIONS

The standard GX clamp is a versatile clamp used mostly for steel warehousing and benchwork. The GX clamp can be used for vertical, vertical/turn or horizontal lifts. The GX clamp is recommended for turning a single sheet or fabricated structure. Due to its swiveling pad and spring-loaded cam, the clamp always stays in contact with the work face of the load, even when the load is turning through 180 degrees. The most exclusive feature of the GX clamp is its wear indicator system. When any of the cam's teeth are flattened, chipped or dulled between the unique wear indicator grooves, it's time to change the cam. (Always replace the pad at the same time as the cam.) In addition, due to their forged components, GX clamps have one of the lowest weight-to-Working Load Limit ratio of any clamps sold in the world. This means they are easy to use and less tiring for the user.
